

Adding_your_own_translation

Here is how to translate MWS localization files into a new language.

1. Find out all the *_loc.py* files, there is one in */htdocs/Framework* and one for each web application in */htdocs/Web_Applications*. Start by copying one of the file and edit your own translations to a new file. For example to create Swedish localization, you need to create *mws_framework_se_loc.py* file in */htdocs/Framework* and similarly a *_se_loc.py* file for each web application.
2. Edit file */htdocs/Framework/WebFrameworkConstants.py*: add your new language into two places (here Swedish is added)
 1. `SUPPORTED_LANGUAGES = ('en', 'fi', 'fr', 'de', 'it', 'es','se')`
 2. `LANGUAGE_NAMES = {'en':'English', 'fi':'Finnish', 'fr':'French','de':'German', 'it':'Italian', 'es':'Spanish', 'se':'Swedish'}`
3. That's it! Now restart the server and you should see your new language available in Settings web page.

Why not make your translation to other users? Upload it to <http://mosh.nokia.com> and add tags 'mymobilesite' and 'mobilewebserver'. Please also drop a note to us: <https://secure.mymobilesite.net/contact/>.
