

ID	CS001392	Creation date	June 5, 2009
Platform	S60 3rd Edition FP1, S60 3rd Edition FP2, S60 5th Edition, S40 3rd Edition FP 1	Tested on devices	Nokia N80, Nokia N78, Nokia 5800 XpressMusic, Nokia 6131
Category	Java ME	Subcategory	System information

Keywords (APIs, classes, methods, functions): System.getProperty, microedition.platform

Overview

The following code snippet demonstrates how to identify the platform version of the device using Java ME.

The platform version can be retrieved just like any system property using the method `System.getProperty`. The method returns a string containing the specified property.

Source

```
/**
 * Executes the snippet.
 * Gets platform version and prints it to the log.
 */
private void executeSnippet() {
    String platformVersion = System.getProperty("microedition.platform");
    if (platformVersion != null) {
        printString("Version: " + platformVersion);
    } else {
        printString("Version NOT found!");
    }
}
```

Postconditions

The platform version is displayed on the screen.

Supplementary material

This code snippet is part of the stub concept, which means that it has been patched on top of a template application in order to be more useful to developers. The version of the Java ME stub application used as a template in this snippet is v1.1.

- The patched, executable application that can be used to test the features described in this snippet is available for download at [Media:IdentifyingPlatformVersion.zip](#).
- You can view all the changes that are required to implement the above-mentioned features. The changes are provided in unified diff and colour-coded diff (HTML) formats in [Media:IdentifyingPlatformVersion.diff.zip](#).
- For general information on applying the patch, see [Using Diffs](#).
- For unpatched stub applications, see [Example stub](#).
