This page presents all the articles in the Forum Nokia Wiki that include the category **Qt for Symbian**.

Contribute topical "Qt for Symbian" articles, tutorials, how to's and code examples to make this section live and truly valuable. By nature Qt is a cross platform technology and thereby Qt applications developed for S60 using standard Qt components should be compilable for any other desktop or mobile platform that supports Qt (for example, maemo), therefore we advice always to add also "Qt" as topic for the articles being contributed.

Please when wanting to refer to Qt for Symbian distribution kits in Wiki articles refer to the page [Qt for Symbian - Installation packages](#) and do not mention specific pre-release package names like garden or tower which will disappear after a each new pre-release.

*We currently have 198 Qt for Symbian articles in this Wiki.*
