

Nokia devices support the same web technologies you're familiar with on PCs; HTML, JavaScript, CSS... When developing for mobile devices, some tuning is needed to your web pages or web application to ensure users get the best mobile-Internet experience. All web pages may not look fancy on mobile browsers so some UI optimization may be needed, or you may want to develop a widget, small application created using standard web technologies.

This page presents all the articles in the Forum Nokia Wiki that include the category **Web Technology**. If you want to know more about web technologies support in Nokia devices, in addition to the information presented here, check also the [Web Technologies Landing Page](#) in Forum Nokia.

Main Topic Areas

- [Web Runtime \(WRT\) / Widget for S60](#)
