

Get HTTP Proxy address and port

```
CCommsDbTableView* commView; // opening the table TPtrC txt = _L("SELECT * FROM Proxies  
WHERE ISP = %d"); TBuf<64> sql; // aIapService is the IAP_SERVICE for select IAP sql.Format(txt,  
aIapService); commView = commDb->OpenViewLC(TPtrC(PROXIES), sql);
```

```
TInt result= 0;
```

```
result= commView->GotoFirstRecord(); if (result== KErrNone) {
```

```
    // Get the address and port  
    ....
```

```
} else {
```

```
    // error!  
    ....
```

```
}
```
