

ID	...	Creation date	June 12, 2009
Platform	S60 3rd Edition, FP1, FP2 S60 5th Edition	Tested on devices	Nokia 5800 XpressMusic
Category	Qt for Symbian	Subcategory	

Keywords (APIs, classes, methods, functions): QApplication::setFont(), QApplication::font()

Overview

This code snippets shows how to change font of application in Qt. API **QApplication::setFont()** will set the font of application, and it take QFont as parameter. so normally we need to specify font using QFont API.

This snippet can be self-signed. As it does not use any API which require developer/certified signing.

Preconditions

- Download and Install latest version [Qt for Symbian - Installation packages](#) which has links on how to install the latest version

Headers required

```
#include <QFont>
```

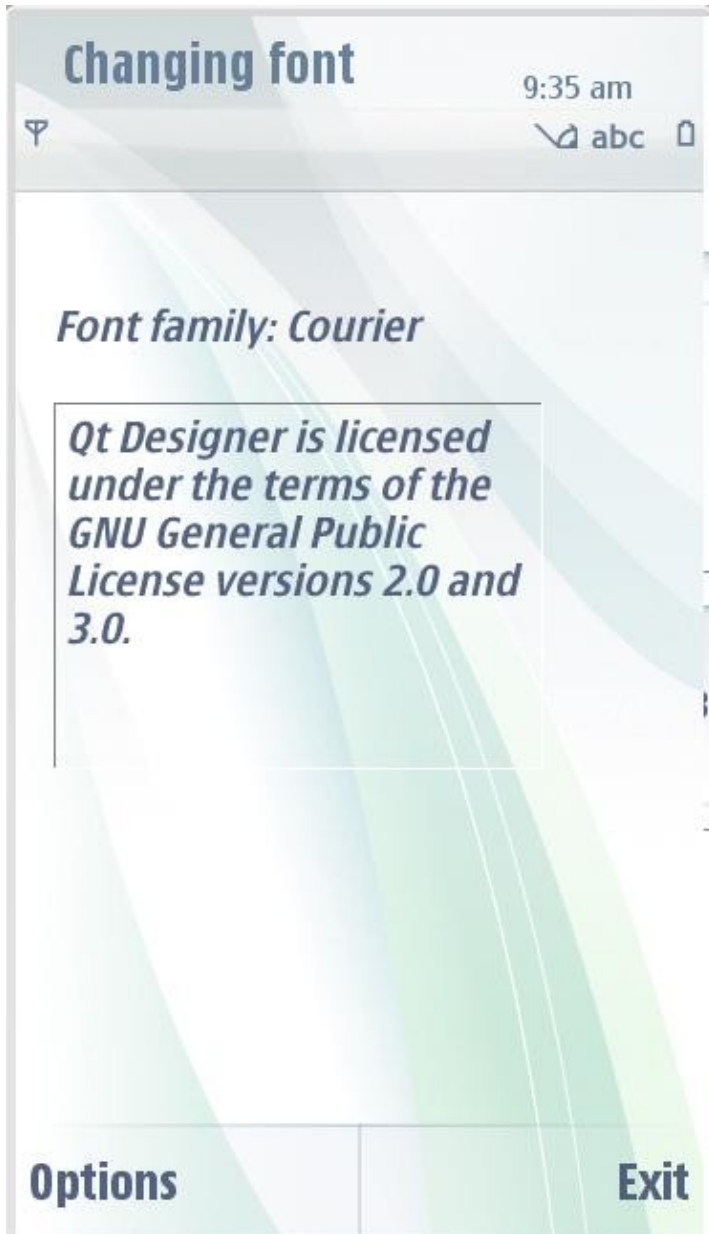

Source

```
//specify a new font.
    (QString::fromLatin1("CourierNewB", true));
//set font of application
    ::setFont(newFont);
```

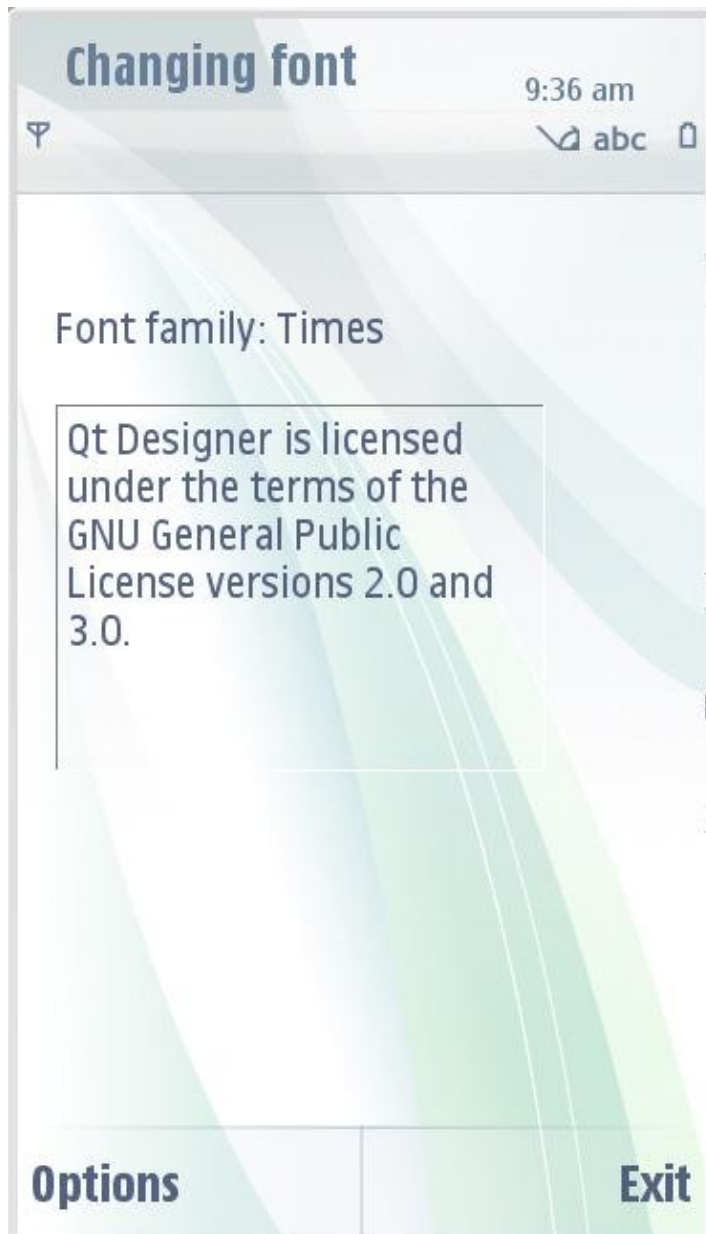

Postconditions

The code snippet is expected to show font "Courier" on application.

Font Courier (Bold and Italic)

After changing font to Times
