

## Creating\_Local\_Message\_Folders

Local folders can be created under the global "Inbox" and under the "My Folders" folders. Access to other locations in the messaging tree is restricted to the system and particular MTMs that own those locations.

To create a custom folder, you can use the following type and MTM settings for the index entry:

```
TMsvEntry mEntry;  
  
mEntry.iMtm = KUidMsvLocalServiceMtm;  
  
mEntry.iServiceId = KMsvLocalServiceIndexEntryId;  
  
mEntry.iType = KUidMsvFolderEntry;
```
