

EPOCHHTTP

- EPOCHHTTP 0.1

This is EPOCHHTTP, a free HTTP server implementation for the Symbian OS S60 platform. The current version is capable of serving out static HTML files(stored in phone memory in the application's htdocs subdirectory). This program can also be used as a base for building dynamic content servers, bridging connections through IR or Bluetooth, etc.

The current version has been tested with Nokia 3650.

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.
