

ID	...	Creation date	26 April 2009
Platform	S60 3rd Edition FP1, S60 3rd Edition FP2, S60 5th Edition	Tested on devices	Emulator
Category	Qt for Symbian	Subcategory	Application

Keywords (APIs, classes, methods, functions): QString,TBuf

Overview

This code snippet demonstrates How to Convert a Qt QString to an S60 descriptor .

Preconditions

- Download and Install latest version [Qt for Symbian - Installation packages](#) which has links on how to install the latest version

Example

```
QString text = "Some text";
QTPtrC16 textPtr(reinterpret_cast<const TUint16*>(text.utf16()));
or
TBuf<KBufLength> buffer(text.utf16());
```

Place the QString in to a pointer Descriptor or buffer. If a heap descriptor is required, the pointer descriptor can be used to allocate the descriptor on the heap.
