

## How\_to\_check\_whether\_the\_phone\_supports\_camera\_from\_Java\_ME

**Reviewer Approved**

This can be retrieved by

```
String videoCapture = System.getProperty("supports.video.capture");
```

Gives whether camera is supported or not

You can also check if the `Manager.createPlayer()` method call returns `MediaException`. This means that the specific locator is not supported.

(Note: You should have the `createPlayer()` call inside a try-clause anyway)
