

How_to_get_id3_tag_from_a_MP3_file

There's no function for getting info about a mp3 file. So there's a function to this use.

```
def getID3(filename):
    fp = open(filename, 'r')
    fp.seek(-128, 2)

    fp.read(3) # TAG iniziale
    title    = fp.read(30)
    artist   = fp.read(30)
    album    = fp.read(30)
    year     = fp.read(4)
    comment  = fp.read(28)

    fp.close()

    return {'title':title, 'artist':artist, 'album':album, 'year':year}
```

If a file name ex.mp3 exists in c:\\others you get the real title not based on the filename !

```
info = getID3('c:\\ex.mp3')
print 'the title is ',info['title']
```
