To use Bluetooth in S60 emulator you have to install BT driver. After some customizing emulator will use your hardware - Bluetooth Dongle.

If you try to customize it by yourself (without installing driver) in purpose to use Bluetooth Dongle, than, for sure, emulator will die.

If you have *S60 3rd Edition FP2 SDK*, the BT driver will be located at `?<S60_SDK_installation_directory>\S60Tools\S60Bt?` directory.

But if you have *S60 3rd Edition FP 1*, you need download it [from here](#)

The installation procedure is described in this distribution package as **pdf*.

After that you need to start emulator, open it's settings, and at **PAN** tab set **HCI** to **USB**, then restart it. Everything is described in detail in previous guide.
