

This article is archived because it is not considered relevant for third-party developers creating commercial solutions today. The article is believed to be still valid for the original topic scope.

Adopting with WidSets

This section brings you the detailed information on how to promote and adopt some of the more advanced features and security to your widget.

The first part, [External linking](#), describes how you can form their own external links that can be used to add widgets to users' dashboard on the fly. The second part of this section, [Token authentication](#), explains the usage of the token authentication, which is a security mechanism developed for encrypting sensitive traffic between the partners and the WidSets server.
