Overview

Sometimes when trying to download a big (~200 KB) Symbian Installation file (*.sis) via the Nokia 6600 browser, the browser gives a "Services: unable to perform operation" message and the installation is not successful.

Description

This error occurs occasionally if you have several applications open and try to download big *.sis files. This happens because DocumentHandler saves the file to d:\system\temp and there is not enough space.

Solution

Corrected in software release 4.09.1.
