Description

The Nokia S60 3rd Edition browser ("Web") does not support accesskey attributes in links:

```
<a href="index.html" accesskey="1">Home</a>
```

The Web Browser for S60 has special keyboard shortcuts, such as the **2** key for **search**, and thus access keys defined for links cannot be used.

For more information, see [W3C Mobile Web Best Practices: Accesskeys](#)

Solution

No solution exists.
