

ID	KIJ001369	Creation date	June 11, 2009
Platform	S60 5th Edition	Devices	Nokia 5800 XpressMusic
Category	Java ME	Subcategory	UI

Keywords (APIs, classes, methods, functions): CustomItem, CustomList

Description

In certain S60 5th Edition devices with touch UI, a MIDlet with `CustomList` crashes when the user traverses a `CustomList` with a stylus, traverses out of the `CustomList`, and adds some LCDUI items on the screen.

How to reproduce

To test this, implement the following test MIDlet:

[CustomListTest.zip](#)

After implementing the MIDlet, do as follows:

- 1) Touch the `StringItem` with the stylus and drag the stylus over the `CustomList` without releasing the touch contact.
- 2) Drag the stylus from the `CustomList` back to the `StringItem` and release the touch contact. The `traverseOut ()` method will be called.

In affected devices the application crashes without any notifications.

Solution

This issue is expected to be fixed in future S60 5th Edition devices.
