Keywords (APIs, classes, methods, functions):

Description

List View's highlight in 3rd-party MTM applications does not appear on the correct row after deletion has taken place. For example, if an e-mail item is selected and then deleted, highlight skips one item.

How to reproduce

Using the following code in S60 3rd Edition, FP1 devices causes highlight to skip one item:

```

CMsgOperation* CMyTextMtmUi::DeleteFromL(const CMsgEntrySelection& aSelection,
TRestatus& aStatus)
{
return BaseMtm().Entry().DeleteL(aSelection,aStatus);
}

```

Solution

There is no known solution for this issue.
