Platform	S60 3rd Edition, S60 5th Edition	Devices	All (S60)
Category	Symbian C++	Subcategory	Messaging, EMail

Keywords (APIs, classes, methods, functions): CPushHandlerBase

Overview

E-mail notification (EMN) WAP push messages are handled using the standard built-in ECOM plug-in *Email Notification Push Handler*. These notifications cannot be redirected to 3rd party plug-ins.

Description

Even though the ECOM framework is used for the handlers, a 3rd party plug-in using `CPushHandlerBase` for EMN WAP push messages does not receive any notifications. The framework selects a default plug-in for standard app-ids:

```
x-wap-application:emn.ua||0x00000009 for e-mail notifications
x-wap-application:mms.ua||0x00000004 for MMS push notifications
```

As a default implementation is always selected, user-defined plug-ins cannot be used for handling these messages.

Solution

No solution exists.
