

Integration with Carbide c++ 1.1

When using public release with Carbide c++ 1.1 you will need to carry out the following:

When you have created new library project, or any new project for using Open C

You must add the following System Include Path to each Carbide.C++ project.

"\${EPOCROOT}epoc32\include\stdapis" Right click on project name in project window. Select "Properties" from the near the bottom. Click on the "C++ Build" tab on the right.

On the right, bottom is System Include Path. Click green "Add" button and enter

"\${EPOCROOT}epoc32\include\stdapis"

without the quotes and click "OK"

Clearly you must follow the install directions with the distribution

My full path is now "C:\Symbian\9.2\S60_3rd_FP1\Epoc32\include\stdapis"

The file Open C SDK is extracted using WinRAR from the top level Epoc32 to

"C:\Symbian\9.2\S60_3rd_FP1\Epoc32
