

## Phonetinfo

PhoNetInfo is a software that retrieves detailed phone and network information. It runs on Symbian S60 3rd and 5th edition mobile phones.

Non-exclusive list of features:

- Phone manufacturer and model
- Firmware version
- Battery level and status
- SIM card status
- MMC and SD card information
- WLAN IP, MAC, MTU and speed
- Bluetooth MAC and device class
- IMSI and IMEI
- Network mode, signal strength
- Network name, cell ID and country code
- Camera information (hard- and software version, formats, etc.)
- Running tasks
- Active profile settings
- CPU speed / type and architecture
- Size of RAM and ROM
- ...

The application can be downloaded in two versions:

- Officially Symbian-signed version (initial release): <http://www.patrickfrei.ch/phonetinfo/>
- Unsigned version (with bugfixes and new features):  
[http://www.patrickfrei.ch/phonetinfo/downloads\\_unsigned.html](http://www.patrickfrei.ch/phonetinfo/downloads_unsigned.html)

Note: The unsigned version can be easily signed via Symbian Signed's "[Open Signed Online](#)" tool. A tutorial on how to sign PhoNetInfo can be downloaded [here](#)
