

Web Run-Time ? For S60 devices

In April, 2007 Nokia announced the addition of Web Run-Time to S60 3rd Edition, Feature Pack 2.

The Web Run-Time adds a Web application runtime environment to the s60 browser, allowing S60 devices to run widgets. Web Run-Time widgets, just as on desktops widgets, are small applications developed using standards-based Web technologies, such as XHTML, CSS, JavaScript?, and Ajax.
