Overview

Series 80 is [Nokia's](#) enterprise platform for [Java](#) and [C++](#) applications, as well as rich content for [Symbian OS](#) enterprise devices. It provides:

- Advanced connectivity options, device management and improved performance
- End-to-end security and backend connectivity
- Two-handed operation
- Large color landscape display
- Full keyboard

The Series 80 platform is designed for creating mobile devices for business use. It is owned and used exclusively by Nokia. The Series 80 platform is designed for two-handed use and makes use of a full QWERTY keyboard. In addition it has a large colour display.
