

Stub Article

This Forum Nokia Wiki article is a **stub** and we are counting on your expertise to help us grow it to a full blown article.

Look below for a "Call For Entries" section which holds the current backlog for this article. Feel free to address any of the backlog topics and to remove them from the backlog if you are confident that they have been already fully covered. If in doubt use the "Comment" tab for discussing the issue. You can of course add more topics to the backlog, they will be handled later by you or any other contributor.

If the "Call For Entries" section is missing please add it yourself but also add some topics to the backlog. The template for creating a call for entry is `{{CallForEntry2}}`

The Start-On-Boot Registration API is an API plug-in provided by Symbian. The target audience are 3rd party developers in need of a autostart functionality for their S60 2nd Edition and/or UIQ applications.

More informations about this API can be found on the "[Symbian OS system libraries](#)" page on Symbian Developer Network.

Call For Entries

The topics listed below are the backlog of this **stub** article.

- when should the API be used?
- what are the devices that [do not] support this AP?
- emulator support

Start-On-Boot_Registration_API

- how to use the API / code sniped / example project
- know issues and limitations
- provide link to existing entries about the S60 3rd Edition specific solution
- provide link to page covering UIQ 3 solution (if any available. Page that is. :)
