

Moved to developer.symbian.org!

- This Symbian specific article is now hosted at [Obtaining and using a Publisher ID](#), on Symbian Foundation's developer community web site. Please use that page for up-to-date information and for further contributions.

In order to submit applications for testing by the [Symbian Signed](#) program, publishers need to be the holder of a Publisher ID from an approved Certification Authority. **TC TrustCenter** is such an authority and, currently, it is the only authority recognized by [Symbian Signed](#).

Please note that old [Verisign ACS Publisher IDs](#) are valid until they expire. Any new [ACS ID](#) (one that is acquired after June 2007) will not be accepted by the [Symbian Signed](#) web portal.

How To Get

1. Submit a request to <https://www.trustcenter.de/order/publisherid/dev>
2. You'll need to provide various identifications to prove you are who you are. *You need to provide documents of incorporation for your company.*
3. Once you receive the certificate approval e-mail, follow the instructions in the e-mail that detail how to install the certificate to your web browser - and how to save (export) the certificate onto your hard disk.
4. Browse to <http://www.symbiansigned.com/app/page/dev/toolSummary>
5. Download tool labeled 'TOOL9 - "tcp12p8" tool to export TrustCenter Publisher IDs.'
6. Use that tool to convert the certificate to a .key / .cer pair.
