Overview

Controlling LED on Nokia E61 for incoming messages

Description

The LED on the front panel of the Nokia E61 flashes to announce the arrival of new messages. This can also be controlled using Publish & Subscribe keys.

Solution:

```
// iProperty is of type RProperty
iProperty.Attach( KPropertyUidEmailLedCategory, KEmailLEDOnRequest );
iProperty.Subscribe( iStatus ); // subscribe to LED status changes (using an active object)
// to switch on LED blinking
iProperty.Set( 1 );
// to switch off LED blinking
iProperty.Set( 0 );
```

KPropertyUidEmailLedCategory and KEmailLEDOnRequest UIDs are defined in the emailedvalues.h header in the Enterprise Solutions SDK.

The Enterprise Solutions SDK is available only in Forum Nokia PRO.
