<b>Platform</b>	S60 3rd Edition	<b>Devices</b>	All (S60)
<b>Category</b>	Symbian C++	<b>Subcategory</b>	Base & System

**Keywords (APIs, classes, methods, functions):** RDebug, \_\_func\_\_

The name of the current function can be retrieved for logging purposes in debug builds with the `__func__` predefined identifier:

```
void LogFunctionName(const char* name)
{
    RDebug::Printf("current function: %s\n", name);
}
```

Now the function name can be printed as follows:

```
LogFunctionName(__func__);
```
