

Good

This example breaks Google's terms and conditions

Unless you have purchased an enterprise license, using this example is against Google's terms and conditions. Make sure you read section 10.8

"You must not ... use the Static Maps API other than in an implementation in a web browser"

Also, section 7.3

"Google gives you a personal ... non-assignable ... license to access"

Terms and Conditions are here <http://code.google.com/apis/maps/terms.html>

Hi Alessandro,

I was searching for JavaME Google MAP api/sdk directly from google.. did not find any.. Are u aware of any such thing, even it means a commercial api. If you are aware of any, I would be grateful for any pointers.

Any case your API are cool and could be a starting point for research use.

Regards, Raja Nagendra Kumar www.tejasoft.com

As we connects to email servers like gmail,yahoo etc through mobile applications this midlet shows how you can connect to google maps proxy settings and to google maps server.This midlet is simple to learn and gives better understing for connecting web servers. It will also provide a function for scrolling.and this will give a idea to make a application like friend finding in maps who are online.. --[Vkmunjpara](#) 16:51, 14 September 2009 (UTC)
