

Talk:HTTP_Post_multipart_file_upload_in_Java_ME

this piece of code works great, but i am having a little problem the HttpURLConnection its not Setting the Content-Lenght and the transfer its being made with transfer-encodign: chunked

i dont know if tha later is giving problems but the thing about the content-lenght its giving some problems with a server with mod_sec that its forbiding REQUEST without Content-Lenght header so im getting a 403 its there any way to set the content-Lenght? setRequestParameter() i think is not working thanks in adavance

Maximum file size that can be uploaded from mobile

I tried the same example. I am able to upload file which are less than 150 bytes. If I upload the file more than that size I get the following error. Please help me in this

java.io.IOException: error 104 during TCP read

```
at com.sun.midp.io.j2me.socket.Protocol.nonBufferedRead(Protocol.java:299)
at com.sun.midp.io.BufferedConnectionAdapter.readBytes(BufferedConnectionAdapter.java:99)

```

Thanks in advance Smith, <http://www.samudhai.com>

Nokia 6300 and J2ME problems

I made MIDDLET which is capable of working to Semens CX75. (Very old!) My MIDDLET create photo and send it to site by HTTP. But "Nokia 6300" reject my MIDDLET.

Help me!

(1) I find sample: HTTP Post multipart file upload with J2ME [1] But it is not an example. It is a hint. It cannot be compiled!

Show to us an example which is compiled by WTK2.5.2 and carried out by Nokia S40 devices.

(2) Show to us an prescription which should compile WTK2.5.2 MIDDLET's examples for Nokia S40 devices. (In particular "CameraDemo" and HttpURLConnection-samples.)
