

## Talk:How\_to\_Launch\_Browser\_in\_3rd\_edition

This code snippet helps you to launch a Browser in 3rd Edition devices. It is very useful in scenarios where in you need to launch your company webpage or any other web page for instance. The article also gives a brief about the various options that can be used while launching the Browser.

Kamalakshan

---

When it launched, it opened a new window and when it reaches 5 windows, it shows an error. Any workaround?

---

For the above issue - what was the error code shown?

---

This snippet does not consider that in v3 initial version devices we can have 2 Browsers one OSS and one WAP browser that might create problems some times with websites opened in wrong browsers. But the explanation about arguments is very useful. --[Skumar rao](#) 18:17, 10 September 2009 (UTC)
