

Talk:How_to_create_a_simple_listbox

This article explains about how to create a list box why this list box are used these are used for the selection of the particular item and move to the specific item page the code is sufficient to create a simple listbox

Creating list box code is bit complicated then creating list box using UI designer. However this article describes how to create list box, using `CAknSingleLargeStyleListBox`, which greatly simplifies the task of beginners. The source code create list box with scroll-bar. From this code example you can easily create list box of different style, for example graphics style list box (`CAknSingleGraphicStyleListBox`) and Double large style list box(`CAknDoubleLargeStyleListBox`), depending on your interest.
