

## Talk:Mobile\_Web\_Server\_FAQ

if a computer is connected to internet(over broadband Ethernet cable), and the Nokia E61 is connected USB. my ask: is it possible to share OVER USB the internet connection from the computer, to use internet on Nokia E61 (sorry because the computer does not have Wireless Lan) ?

Not with Mobile Web Server. You would need some other program that would allow you to have a network over the USB. [Adammw](#)
