

No comment here? Nobody (dis)likes this API package? :)

Ltomuta 13:30, 26 February 2008 (EET)

Could we have a short note about how to install it?

I second that. I've got a bunch of zip files - now what? No install docs on the download page or in master zip file. In the zip files inside the zip, there is a README.txt with "Copy this archive to EPOCROOT and unzip." Except that doesn't work. I get a bunch of directories with the API name and underneath that there's an epoc32 directory, which I'm guessing is supposed to be up one level. Can I just manually copy all the files?

How to solve this problem??

Hi

platform - S60_3rd_FP2_SDK

To do live recording/authoring, [S60 3rd Ed SDK FP2 API Plug-In Pack v1 1.zip](#) was unzipped and installed but still are some files which are missing like mmf\mmfcontroller.h, mmf\mmfutilities.h etc etc. These files are required by sounddevice.h which contains CMMFDevsound object which I am using for live audio recording.

Is there any other extension plugin which i need to install to accomplish this task.

Thanks

SyncML missing!

Why is the SyncML Client API not included in "API Plug-in for the S60 3rd Edition SDK for Symbian OS, for C++, supporting Feature Pack 2"?

Thanks, Alex Birkett

MDFDevVideo Record and Playback API

Platform: S60 3rd FP2; Extension : version 1.2; Problem : The corresponding plugin provided by Nokia does not contain the necessary header file `epoc32/include/mmf/devvideo/devvideoconstants.h`, which is used by other header files in the plugin.

PS Keys for Call Status & Indicators API for S60 3rd MR version

I just updated the article with internal referencing but I feel that it is pointing to wrong link, isn't it? Please click on "History" and see the revisions. --[Kiran10182](#) 14:13, 2 March 2009 (EET)

missing tvoutengine.lib from 5th Edition Plugin Pack

Hi,

Headers and library of tvoutengine api are missing from the 5th Edition Plugin pack. Is there a way to get the tvoutengine.lib file? I can probably get the header files from eclipse Documentation plugin for this API

The Article informs us about the API plug-ins used in different S60 versions. The basic concept of API plug-ins is clearly described and where to use them is also mentioned. The different extension API plug-ins for S60 3rd edition MR , S60 3rd Edition FP1, S60 3rd edition FP2 and S60 5th edition are given in this article. Each API plug-in mentioned is having a link, so that you can get detailed information about that particular plug-in.

The article explains API plug-ins and mentions extension API plug-ins for almost all S60 editions. So it becomes essential for both beginners and experienced people.--[Deepikagohil](#) 17:25, 6 September 2009 (UTC)

Not able to use Item finder API for 5th Edition Plugin Pack

Hi,

I am not able to use the Item finder APIs, tried sections from "API Plug-in for the S60 5th Edition SDK for Symbian OS, for C++" also. i have open new discussion as <http://discussion.forum.nokia.com/forum/showthread.php?p=642344#post642344>. Please rectify and help.

-Jupitar

Really useful article to know how to download SDK Plug-in API that is provided by forum nokia and how to use each API. Since forum nokia is providing API that is not part of the public SDK, we have to download it from link given in this article. The article provides downloadable link for each version of SDK from S60 3rd Edition MR to S60 5th Edition SDK. Also link provided to each API , that is part of API plug-in, will help developer to implement it easily.
