## Introduction

When I first launched emulator, I found that my emulator language was Thai (my native language).

I thought "**Wow! WidSets emulator support Thai!**". But actually I didn't like it. I want it to show in English as my real device does. I believe that so many people face this problem too. So I write this article to show you **how to change your emulator language**.

## Instruction

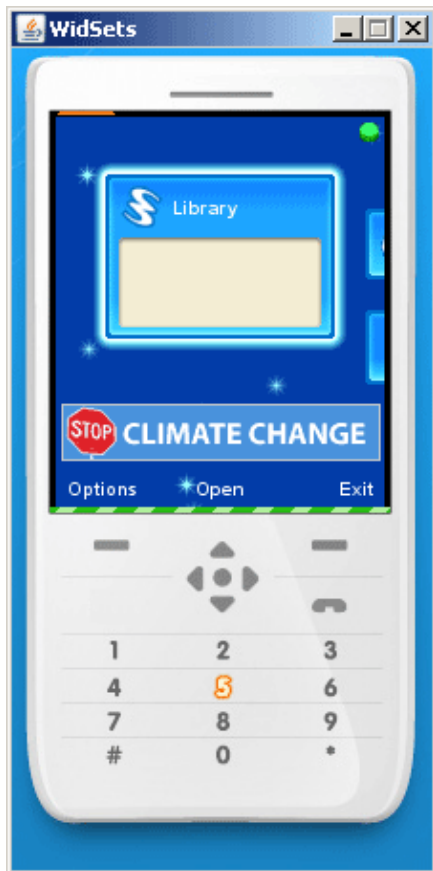

As you know, WidSets emulator is a Java Application. So, it uses Java locale to define its language. To change emulator language, you have to fix locale settings. First, open **devkit.bat** with any editor and you will see this.

```
@java -cp sites -jar bin\devkit.jar %*
```

Insert **-Duser.language=en** between java and ?cp like this.

```
@java -Duser.language=en -cp sites -jar bin\devkit.jar %*
```

Now, your emulator language is English already. :)

You are also able to change locale to another language by changing **user.language** value in devkit.bat. For example, let's change it to **it** (Italian).

```
@java -Duser.language=it -cp sites -jar bin\devkit.jar %*
```

Here is the result.

Enjoy!
